

Minutes of meeting

Meeting 14-06-2022 11:15 – 11:45

ISJS PROGRAMS

Attendees

Group 5:

- Ivan Sakal
- Saeed Ba Wazir
- Soleil Umwiza
- Jessie van Nuenen

Media Bazaar representative:

- Aleyna Kartal

Notes:

First priority is finishing and polishing the website as well as completing automatic scheduling. It is also important to start working on some small feedback points that have been given:

Website

- The schedule on the website for employees is still requested to be changed like the one in desktop. (Switch days and shifts, add shifts to the times, possibly use some kind of color scheme and/or icons instead of only text when someone is assigned)
- For unavailability add a textbox to specify a reason when 'others' is selected.

Automated scheduling

- Add a default minimum of employees. But make it possible to change the minimum of employees for a certain day, as well as adding a maximum. (Make sure people do not overwork there FTE, it is not a problem if they have less hours.)

After that the priority is on other features like department managing and check in and check out. There are also some other small (design) improvements that should be worked on.

Features

- For department management it should be possible to delete and view departments. Viewing includes the amount of employees as well as statistics. (Other features regarding department management have a lower priority.)
- The time should be registered when checking in or out. For people who have two shifts in a row there is no double check in or check out needed.
- When an employee did not show up it would be nice to have it displayed in red. When they were 15 minutes late or left 15 minutes early it can be indicated with yellow or orange.

Small changes

- Look into changing the color scheme of reshelve request to a scale from red to green.
- On the website also use white text on darker backgrounds.
- Change the colors of the icons on the homepage on the website to one of the blue colors we already use instead of purple.

In case everything discussed is done and there is still some time left it would be nice to add the cashier system as discussed earlier.

During the last demo and presentation the client would like to be mostly shown the features we did not show before. That would mean everything noted above.
